

# Top 5 Overlooked Tools to Protect Your Kids Online

Brought to you by: [The Protect Kids Online \(PKO\) Membership](#)

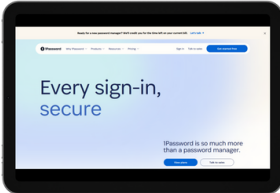

1

## **Common Sense Media**

This is your go-to tool for deciding if that new app, influencer, video game, or movie your child is obsessed with is appropriate. Wondering if the content is safe, educational, or riddled with hidden dangers? Common Sense Media provides expert, parent, and even kid reviews to help you make informed choices—all in one place.

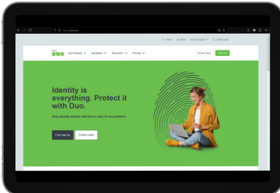

2

## **1 Password**

Did you know weak passwords are one of the easiest ways for predators to access your child's online accounts? With 1Password, you can create strong, unique passwords for every account, and as your kids grow older, teach them how to safely manage their own passwords. This simple step stops hackers from snooping into private photos, messages, and more.

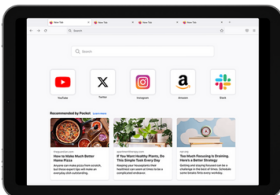

3

## **DUO Security**

Passwords aren't enough—predators and hackers can still find their way in. The DUO Security, a two-factor authentication tool that adds an extra layer of protection for your child's accounts. Even if someone guesses the password, DUO ensures only trusted devices and users can access sensitive information. It's a must-have for peace of mind.

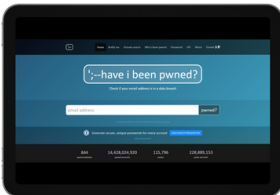

4

## **Mozilla Firefox Browser**

Ads can be more than annoying—they're tracking your kids and collecting their data. Mozilla Firefox is a family-friendly browser that limits tracking and ad targeting, giving your kids a safer, more private online experience. Bonus: It helps reduce the chances of inappropriate content sneaking into their screens via targeted ads.

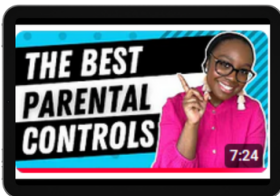

5

## **Have I Been Pwned**

Predators love easy targets—and outdated passwords or leaked email accounts make your family vulnerable. With Have I Been Pwned, you can quickly check if your email or passwords have been exposed in a data breach. Fixing a compromised account could be the difference between keeping your family safe and being a target for online threats.

6

## **Secure Parental Control Apps**

Not all parental control apps are created equal—many are insecure and can do more harm than good. The best ones, like Norton Family, Microsoft Family Safety, Google Family Link, and Apple Family Sharing, give you tools to block inappropriate content, monitor screen time, and set healthy boundaries.
